Monster Ultra Series THX-Certified Home Theater Cables

THX developed cable specifications for accurate system connections because cabling is an important element in the signal path of home entertainment systems, which present a unique challenge in maintaining the integrity of the audio signal. The cumulative effects of frequency response errors, hum, and other distortions become very audible in such complex, multi-channel home theater systems. THX certification standards include a series of electrical, physical and ergonomic specifications that guarantee top-notch sound reproduction and premium-grade construction.

Auralex acoustics Acoustic treatments

Acoustical treatment is an aspect of Home Theater too often neglected. Whether you've spent hundreds or thousands on your HT setup, it will sound noticeably better with a few carefully selected products. Reflective surfaces (especially opposing walls) are the enemy of crisp, clear sound and the shear number of speakers in the typical HT set up compound the problem.

Auralex SonoFlat Systems offer an all-inclusive room treatment option with a sophisticated architectural styling. The SonoFlat Systems offer all the great advantages of our industry-leading Studiofoam such as performance and longevity, and also provides you with a multitude of design possibilities for home theaters, recording studios, and other critical listening environments.

- **The SFS-184 and SFS-112 are acoustically engineered to provide accurate sound in small and medium sized rooms.**
- **wall/ceiling coverage of 25 to 50%: critical for great, accurate acoustics.**
- **Easy installation.**
